

MKT3434 GUI Enhancement Report

Name: Safa Emre Beytekin
Student ID: 2206A020

GUI Enhancements Overview

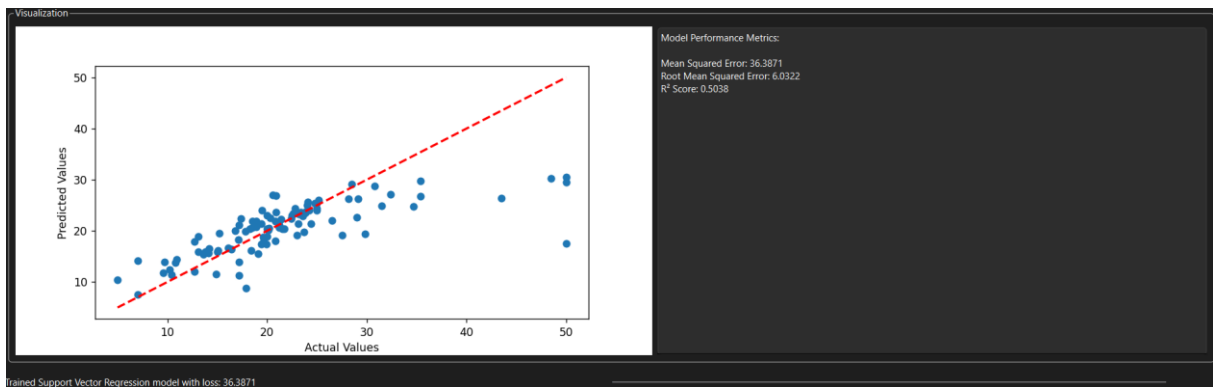

The GUI was extended with several new features:

- Dynamic loss function selection for regression and classification
- Kernel and hyperparameter tuning for SVM and SVR
- Custom priors and smoothing for GaussianNB
- Missing data handling options
- Interactive performance visualization

Support Vector Regression Test on Boston Dataset

SVR was tested on the **Boston Housing** dataset using different loss functions. Users can tune kernel, C, and epsilon, and view the performance metrics dynamically.

GaussianNB with Custom Priors

Naive Bayes classifier now allows input of custom priors, such as [0.3, 0.7].
var_smoothing is also adjustable through the interface
